The authenticity of oak in your interior design project

Imagine everything you love about rift white oak veneer infused with innovation, enhanced performance, and a sustainable edge. That's exactly what Unilin Master Oak delivers. It's not just an alternative to traditional oak veneer - it's a leap forward.

Enjoy the warm charm of oak without the worries: scratch-resistant, colorfast, and low-maintenance. It's timeless elegance designed to last.

Unilin Master Oak elevates every project with its unique combination of performance, design, and durability - making it the ideal choice for both commercial and residential interiors.

Groundbreaking wood technology

How are we able to replicate the look and feel of real oak or veneer so perfectly? It's all thanks to our **patented Timber Touch Technology and advanced digital print technology**. The Timber Touch Technology provides 20 times more depth and texture than standard structures, along with a unique matte finish. Thanks to our digital print technology, Master Oak also gains extra color depth, contrast, and sharpness. The varied wood pores - ranging from fine to coarse - give Unilin Master Oak such a natural appearance that even professionals struggle to tell it apart from real wood.

Oak made for real life

Unilin Master Oak high-performance veneer gives you a budget-friendly alternative to solid wood or veneer that stands the test of time.

- **Scratch-resistant:** Up to 3 times higher scratch resistance than real oak. A surface that retains its appeal, no matter how often it's used.
- **UV-resistant:** Colors that don't fade, even after years of exposure to sunlight.
- **Stain-resistant:** Easy to clean, effortless to maintain.
- **Pre-finished:** What you see is what you get. No surprises or color variations like with solid wood but a consistent look throughout your project.
- **No repetition:** The natural pattern unfolds without visual breaks.
- **Design flexibility:** Combine Unilin Master Oak on chipboard or MDF substrate with matching laminate and edge banding for unprecedented design freedom. Edge banding is available for both long and end grain-edges.

A sustainable alternative to oak and veneer

Did you know that creating beautiful interiors doesn't have to mean cutting down forests? That's right, the wood in our boards is **100% recovered**. This is wood others can't use (such as from roadside maintenance). By giving discarded wood a second life, we've created Europe's lowest carbon footprint chipboard and MDF panels.

Our journey toward circular materials began in 1960, when we pioneered the use of flax shaves (waste from local flax farming) as a raw material. Choosing Master Oak on a Unilin chipboard substrate means opting for **95% recycled wood** and **full Cradle to Cradle Bronze v4.0 certification** in decorative panel material and HPL - an industry first! And our MDF panels? Thanks to their Cradle to Cradle Material Health Bronze v4.0 certification they meet the highest standards for material health.

Did you know we've achieved a world first with our MDF boards? **We're the first to develop the technology that makes large-scale MDF recycling possible.**

✓ stain-resistant

Keep your Master Oak shining

Maintaining your Unilin Master Oak is extremely easy. All you need to keep your surface in top condition is a **microfiber cloth, lukewarm water and some all-purpose cleaner**. Always wipe along the grain for optimum results.

Important: **avoid using dish soap, abrasives and corrosive products**. Dish soap contains oils that can leave a residue, while abrasives and hydrogen peroxide may cause damage or discolouration.

Unilin Master Oak

A collection that
inspires...

Unilin Master Oak is available in 9 unique wood designs.
Whether you prefer natural wood tones, luxurious green or
characterful copper, you're guaranteed to find the perfect
design that completes your interior.

Use Unilin Master Oak for:

- **Furniture** with decorative panel material (chipboard or MDF), laminates and matching edge banding for both the short and long edges,
- **Doors** in door-size laminate,
- Or **wall applications** using the seamless Clicwall system.

Master Oak is ideal for both horizontal and vertical applications. Think of table surfaces, cabinetry, case goods, reception desks, kitchen fronts, shelving, display units, walls, and more.

The perfect color and texture match across all materials brings harmony and coherence to any interior design project.

Bring the outdoors in with **earthy tones**

For an interior that breathes.
Discover wood tones that fill any space with warmth and purity.

Project spotlight: **Occhiolino restaurant, Toronto**

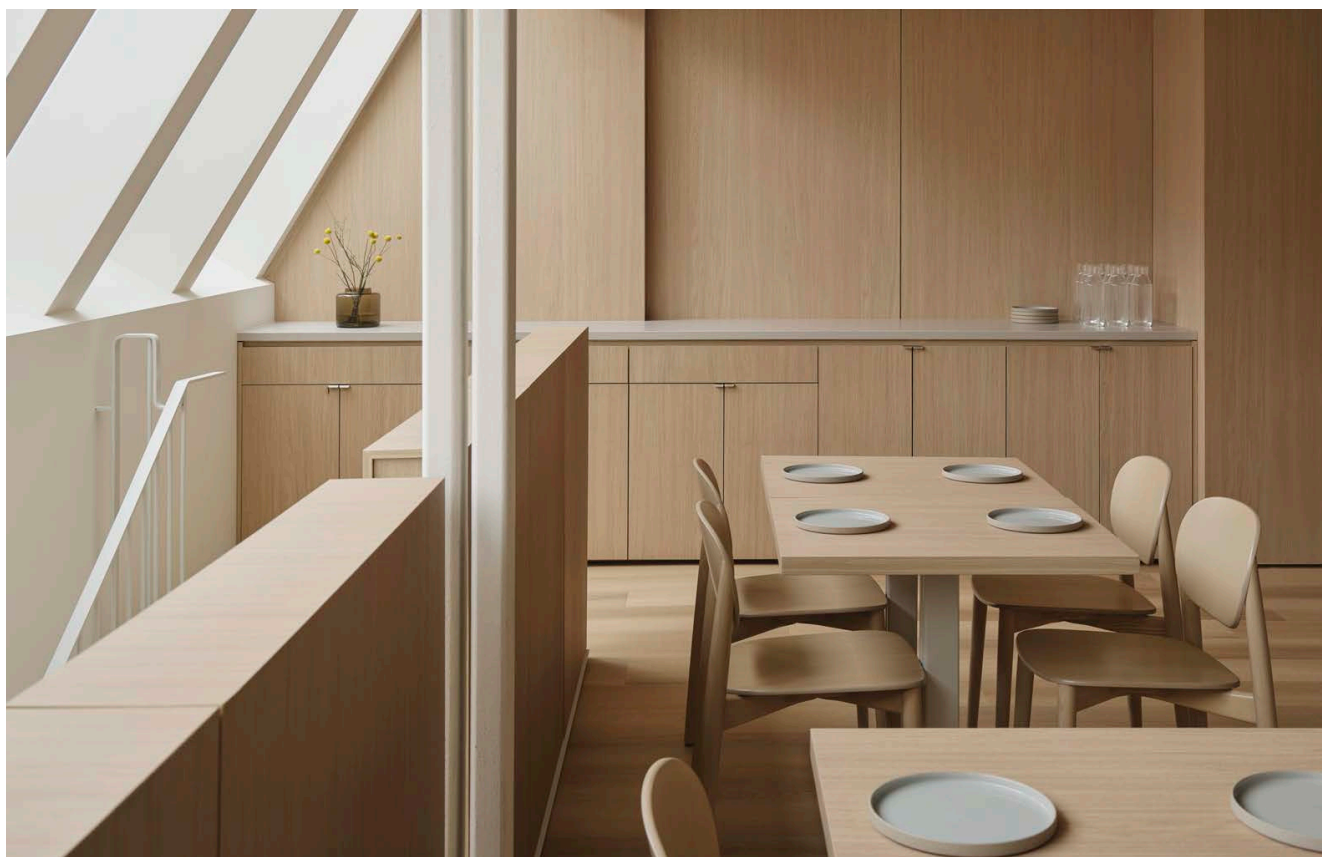

Pasta tastes better in good design. From cabinetry and benches to the bar and tables, Master Oak light natural turned out to be the perfect surface paneling for a bustling restaurant.

Design duo Guido Costantino & Domenica Rodà found the sweet spot between warmth, texture, and durability in one seamless material.

The result? A pasta spot that's already been named one of Toronto's most beautiful restaurants.

The oak you love, **built to last.**

Great design shouldn't impress for just one day. It should keep performing – day in, day out. And that's exactly what Unilin Master Oak delivers.

- **UV-resistant:** maintains its beauty, even under the brightest sunlight.
- **Scratch-resistant:** resists scratches up to 3 times better than traditional oak veneer.
- **Stain-resistant:** easy to maintain, simple to clean.
- **Pre-finished:** what you see is what you get.
- **Color and design match:** available in matching panel material, laminate and edge banding (long and end-grain).
- **No pattern repetition:** continuous design in full panel.
